

Offshore Equipment Rental Software

All-In-One Cloud and Mobile Solution From Field Tickets to Management Dashboards

RigER is a cutting-edge oilfield operations management software designed specifically for offshore service companies that provide energy services and equipment rentals.

Since 2012, RigER has been a game-changer in the oilfield industry, facilitating efficient and cost-effective operations for offshore service companies worldwide. As a cloud-to-mobile solution, RigER replaces traditional paper-based and manual processes with an intuitive digital platform, enabling companies to streamline their operations and maximize their profits.

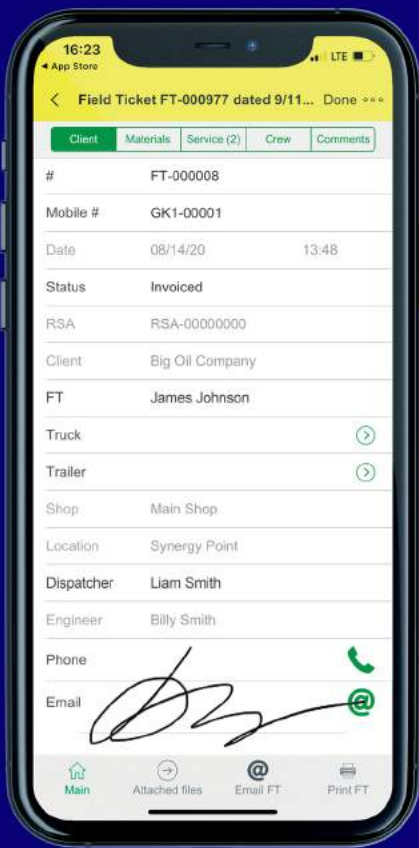

Through process optimization, automation, paperless document management, and digitalization of operations, RigER is driving the transformation of the energy industry. Offshore service companies rely on RigER as their trusted digital partner for all aspects of their operations, from mobile field tickets to management dashboards, ensuring seamless communication and collaboration at every step of the way

- All-in-One ops management software
- Comprehensive and customizable
- Real-time visibility of business KPIs

A unified and centralized system, helps streamline processes and improve data visibility across all departments: Purchasing, Sales, Finance, Manufacturing, Equipment Oil-field Services and Rentals.

RigER is configurable and customizable. It can be tailored to the unique business processes of your company thanks to industry-specific features and modules.

Having visibility into various aspects of your business is a powerful thing. With KPIs, reports, and dashboards, RigER gives you a comprehensive view of your business in real-time.

All-in-One Solution to Manage Operations

Core Functionality

Digital Field Tickets

RigER's mobile field ticketing grants you online and offline access to create, review, approve, digitally sign, and upload all types of field tickets from any device. That's zero unnecessary travel and wait time, no fuel waste, and zero human errors.

Asset Management

Manage your fleet of rental oilfield equipment by status, location and past or upcoming scheduled maintenance, from your mobile device. Bundle equipment into combo units to rent them more easily, track assets correctly and get notified instantly about damaged, lost or stolen units.

Dispatching and Scheduling

Get real-time control over the availability of your equipment and technicians. Be sure the right person is assigned to the right job, every time and schedule recurring services and tasks so they automatically dispatch the correct personnel. Bonus features include collecting e-signatures from the client right in the field, and creating work orders right from your mobile device.

Invoicing

Create invoices in the field so that they can be approved on the spot and delivered as soon as the job is done. Everything is stored securely in the cloud, get notified when due dates are approaching or elapsed. Avoid big mistakes like forgotten invoices, and smaller ones too like messy handwriting or a pesky ink smudge.

Equipment Maintenance

Gain full visibility of upcoming and ongoing maintenance tickets. Eliminate forgotten work orders, and check on the status of a unit from anywhere at any time. Schedule preventative maintenance for each unit to keep your inventory online and in circulation, and get notified well ahead of time so you know which inventory to pull out of rotation and when.

Equipment Subrental

Track costs and utilization rate of 3rd party rental units in one system.

Price Management

Ensure detailed tracking to capture and attribute to the source all changes made to the price documents by authorized personnel, in once centralized, easy-to-access place. That includes: Daily rate, Periodic rate, Service rate, Sales rate, Package pricing, Standby rate, Discounts, Prices by Divisions, Volume-base pricing and Dynamic Discounts.
